- Customisable M-button: Choose between 5 different preset functions

50+ HOURS OF PLAYTIME WITH ANC. 80 HOURS WITHOUT.

Don't let battery life be one more thing to worry about on your daily travels. When you think of long-lasting playtime. Think Marshall. One charge. More than three entire days and nights of playtime. Several weeks of your commute's soundtrack covered. Breathe life into those journeys you sometimes just don't want to do. Then let the music spill over to the weekend without a second thought.

ADAPTIVE ANC & TRANSPARENCY MODE

Forget standard noise cancellation. Focus on next-generation ANC. Adaptive ANC automatically reacts to distracting sounds before you need to, in real time. With multiple microphones monitoring and analysing your environment, it adjusts your ANC to block out any unwanted noise and amplifies the most important parts of your music. Enjoy a smooth listening experience as you move through your day. To let surrounding sounds back in, Transparency mode is one press away.

DURABLE & FOLDABLE DESIGN

Portable in design, yet still tough enough to withstand the heaviness of life in constant motion, Milton A.N.C. is built for every part of your day. From coffee runs to lunch rushes to small screen viewings on the ride home, they always keep up with your pace. Fold them, pack them, drag them out and still get maximum performance and comfort.

SOUNDSTAGE SPATIAL AUDIO

Standard headphones want to push the sounds inwards. Milton A.N.C.'s enhanced stereo sound releases your music by moving it out of your head. This feature expands the naturalness of sound, making it wider and spread around you. Compatible with any streaming service, you can enjoy a listening

experience that places you front and centre. Making it feel like you're in the room with your favourite band playing around you or right at the heart of the action.

ADAPTIVE LOUDNESS

Keep your music alive at any volume. This feature automatically adjusts your sound to match your surroundings and preferred listening level. If surrounding noise starts to creep in, it raises the bass and lower mids so details don't get drowned out. If you're listening at lower volumes, it lifts bass and treble for a rich, full sound that stays balanced. Skip the fuss of constant adjustments. Get consistent sound and quality listening wherever you are.

CUSTOMISABLE M-BUTTON

Accessing custom actions is made easy with the M-button. Now a staple feature and more functional than ever. At the press of a button, you get straight to your chosen preset. Toggle between ANC and Transparency mode or turn soundstage spatial audio on and off. You can also switch between your preferred EQ settings. Go directly to a Spotify playlist or call on your voice assistant without the need to pick up your phone.

In the box

- USB-C charging cable
- Quick start guide
- 3.5mm audio cord
- Legal and safety information
- Pouch
- Audio cable
- Safety Instructions
- User manuals
- Detachable Power Cable
