Scuba V3 - EU

256014

Aiper Scuba V3 robotic pool cleaner with Cognitive AI Navium™, VisionPath™ & JetAssist™ waterline cleaning. MicroMesh™ ultra-fine filtration to 3 microns. 8.5 kg. Automatic waterline retrieval. App control.

Colour

PRODUCT DETAILS

Featherlight Design

Weighing only 8.5 kilograms, comparable to a large housecat, N31 is engineered for effortless removal from the pool. Its compact, lightweight design minimizes lifting strain, making daily pool maintenance effortlessly adaptable.

AI Patrol Cleaning

Single front-facing AI camera detects over 20 debris types within 3 seconds and adapts cleaning paths. It cleans up to ten times faster than traditional methods for efficient, energy-saving pool floor cleaning.

Cognitive AI Navium™ Mode

Cognitive AI Navium Mode creates autonomous weekly cleaning plans by analyzing pool size, weather, and cleaning history. Once activated, it runs without user intervention, keeping your pool maintained and swim-ready.

VisionPath™ Adaptive Path Planning

VisionPath combines AI vision with dToF sensors to plan efficient cleaning routes for the pool floor. It identifies obstacles and uses a two-mode system for comprehensive floor coverage without repeated cleaning.

JetAssist™ Horizontal Waterline Cleaning

JetAssist™ uses a single pump with side nozzles for lateral waterline cleaning. This energy-efficient system moves smoothly along the waterline, delivering thorough cleaning without manual brushing or extra power consumption.

Dual Brushes with 4800 GPH Suction

Front and rear dual brushes scrub stubborn debris while powerful 4800 GPH suction lifts leaves, stones, and large particles quickly. This reduces repeat cleaning and ensures thorough pool maintenance with less effort.

Replaceable MicroMesh™ Ultra-Fine Filter

The dual layer MicroMesh filter captures particles down to 3 microns including sand, algae, and debris while preventing clogging. Its replaceable design maintains strong suction and long lasting performance for uninterrupted, superior pool cleaning.

Waterline Retrieval with Real-time App Alerts

After cleaning, the robot automatically returns to the pool's waterline and sends real-time alerts via the app. This means no need to enter the pool or use tools for retrieval.

TUV Certified Data Privacy Protection

Fully TUV certified for data privacy, V3 processes all visual information on the device with nothing stored or uploaded. Your pool stays clean and your data stays yours.

One-click Activation

Start cleaning easily with one button. Press and hold to power on, tap to switch modes. Intuitive LED guides make operation simple for everyone, including seniors, with no screen or complicated controls.

Smart APP Control

The Smart App Control Center offers instant start, mode switching, real time monitoring, cleaning history, and Cognitive AI insights all from one intuitive interface.

In the Box

- Robotic Pool Cleaner x 1
- Charging Dock x 1
- Charger x 1
- Replaceable MicroMesh™ Ultra-fine Filter x 1
- Hook x 1
- Buoyancy Foam x 2
- User Manual x 1
- Quick Start Guide x 1
